## Alternativa källor

Ta bort primära källor och växla till alternativa källor

Det kan finnas tillfällen då den matchande källan inte är som du förväntade dig att den skulle vara. Inga problem! Vårt system visar den källa som anses vara mest relevant, men sparar även överlappande matchningar som "alternativ", dvs andra källor som innehåller likheter med just detta textblock.

Om du vill se den alternativa textmatchningen, klicka på alternativa källor under källan eller "Visa alternativ" under den dolda menyn när man klickar på de tre prickarna.

Om du inkluderar en alternativ källa tas den primära matchningen automatiskt bort och skickas till papperskorgen. Du kan när som helst återställa den primära källan genom att återställa den från papperskorgen.

STUDENT'S ASSIGNMENT

I want to emphasize one particular aspect of multilingual interaction which is its multimodal and multisensory related concepts: Translanguaging Space and Translanguaging. I want to underscore the necessity to bridge the artificial and the so-called sociocultural and the cognitive approaches to language practices. In doing so, I respond to some of the critical aspects of the notion of Translanguaging.

SWITCH TO AN ALTERNATIVE OVERLAPPING MATCH

We display the matches our system deems as most relevant. However, you can choose to remove the primary match and include alternative overlapping matches instead. An overlapping match is also a match to this particular section of text but from a source our system has ranked as less relevant.

Select one of the levels below and the matches in it will be set as primary, meaning that they will be included in the report. The current primary match will be sent to the waste bin.

- LEVEL 1  
Contains overlapping matches from 1 other source(s)
- LEVEL 2  
Contains overlapping matches from 2 other source(s)

SAVE AND CONTINUE CANCEL

## Växla till alternativa och överlappande källor

Välj vilken som ska inkluderas

Om du klickar på "Visa alternativ" får du möjlighet att välja vilken alternativ källa som ska inkluderas.

Alternativa källor är kategoriserade i nivåer, eftersom en överlappning kan vara matchningar från flera källor. Expandera nivån (klicka på pil ner, till höger) för att se vilka källor som finns i den och välj vilken som ska inkluderas i stället.

The dangers of Diving

The Greek archipelago, this nautical Ede  
Lego box of undiscovered treasures and  
last recovered" by the renowned free div

free and a  
ut now at  
ven, but it

John D. Ives, PhD Hist. at Cornell summarizes in Modern Aquatic Archeology And Other Naval Gazing 2012 (2) (trans.) The reduced protectionism around the Mediterranean "Just over seven years ago, the Greek authorities finally easing up on their firm ban of SCUBA diving. Their strict approach was based, wisely so, on the fact that there are archaeological treasures basically everywhere in the Aegean seas. Now they have given some authorized diving center permission to dive on a few selected sites. Diving Center Crete and Adventure Blue are the two most famous dive centers in the area."

One of the dive sites is located off the island of Thodorou where permission to dive in an area where a German Messerschmitt plane crashed during the Battle of Crete during World War II in 1941(3) has been recently granted.

Although planes from WWII could be considered ancient by some so do not feel the Greek authorities that there is any immediate danger to the Greek cultural treasures for scuba divers visiting that particular site. It has namely made sure to clear the area of every single gadget of archaeological value before being released until the grasshoppers. It is unfortunately the case that, too often, if not almost always, or perhaps even always, picked souvenirs from the seabed, be it from wrecks or sunken columns and dropped fishing lines. It is also why this ban on scuba diving has been in place for so long. It is said that Jaque Yves Cousteau was immediately ported from Athens Underwater Archaeology Museum after they realized the consequences of his and Gagnan's invention of the "aqua lung" would it become adopted by a the general populace. (4)

What is decompression sickness?

Decompression sickness, by many referred to as "the bends" or "diving sickness", is triggered when bubbles of nitrogen forms in the blood and tissue of a body. These bubbles follow when a person rises from deep water to shallow water, where the pressure is lower, too quickly.

The Greek archipelago, this nautical Eden for the world divers. Clear water with meters and meters of the free and unobstructed visibility. In principle shark free and a Lego box of undiscovered treasures and sunken cities and lower ships from the Phoenician, Egyptian, Greek and Roman times. A "paradise that was lost but now at last recovered" by the renowned free diver and poet Geoffrey van Spladoosh once put it, (1) Now, however, it is not really free access to the kingdom of heaven, but it is one that is controlled and checked very hard by the Greek authorities and its naval forces, although the situation is beginning to improve.

John D. Ives, PhD Hist. at Cornell summarizes in Modern Aquatic Archeology And Other Naval Gazing 2012 (2) (trans.) 94%

MATCHING TEXT

The diver may complain of vertigo or headache, unusual fatigue or tiredness. He or she may have a rash, pain in one or more joints, muscular weakness or tingling in the arms or legs or paralysis. Less often; shock, difficulties with breathing, unconsciousness or death may be seen. The symptoms generally appear in a relatively short period after completing the dive. Almost 50 per cent of divers develop symptoms within the first hour after the dive, 90 per cent within six hours and 98 per cent within the first 24 hours. (5) In practice this means symptoms that appear more than 24 hours after the dive are probably not decompression sickness. An exception is if the diver has travelled in an aircraft or has been travelling in the mountains. Under these circumstances, low pressure can still trigger decompression sickness more than 24 hours after the last dive. As a result, it is wise not to fly within 24 hours of a deep dive.
